

Wika's Type 910.24 mini-siphon replaces pigtails and coil siphons

The Wika Type 910.24 mini-siphon is specifically designed to replace pigtails and coil siphons. The mini-siphon has a thermal barrier that protects the pressure gauge from harmful steam, vapors and liquids, and contains an inner chamber that reduces pressure surges and “water hammer.” By mounting the gauge closer to the process, the mini-siphon is designed to eliminate gauge whip and vibration that is typically found on traditional siphons.
