## WIKA Instrument Corp: Process industry gauge

Thursday, January 14, 2010

The M93X.D1 all-welded system from WIKA is a drop-in retrofit for existing gauge or seal assembly. With its rugged design, this seal and gauge assembly can reduce the total number of gauge requirements. The all-welded, tamper-resistant construction is ideal for tightly controlled environmental emissions and safety applications. The M93X.D1 meets fugitive emission demands and eliminates potential leak paths.

This process industry gauge is for use in corrosive contaminated or viscous media. The unit does not allow any excess to the system fill and the gauge is permanently welded to the seal body.
