MH-2 mobile hydraulic pressure transmitters offer extreme shock and vibration resistance, high-pressure steam wash down protection, and a cavitation dampening system. Pressure ranges from 1000 to 8000 psi are standard. The need for additional soft sealing materials is eliminated with the use of its all-welded thin film measuring cell. Thin film sensor provides long-term stability with the use of sputter technology. It contains a rugged glass reinforced PBT plastic case, specifically for under hood applications.
