WIKAI Instrument Corporation, Pressure Measurement Instrumentation Leader, Launches air2guide Product Family of Low Pressure, Differential Pressure Gauges

Metro Atlanta-based WIKAI Instrument Corporation (WIKAI) recently continued to advance the world of pressure measurement with the introduction of the air2guide family of differential pressure (DP) gauges.

Designed to measure very low pressure ranges from 1 to 25 InWC, the air2guide has been value-engineered and optimized to provide significant installation time savings—over 50 percent, compared to competitive systems, and eliminate the need for tools.

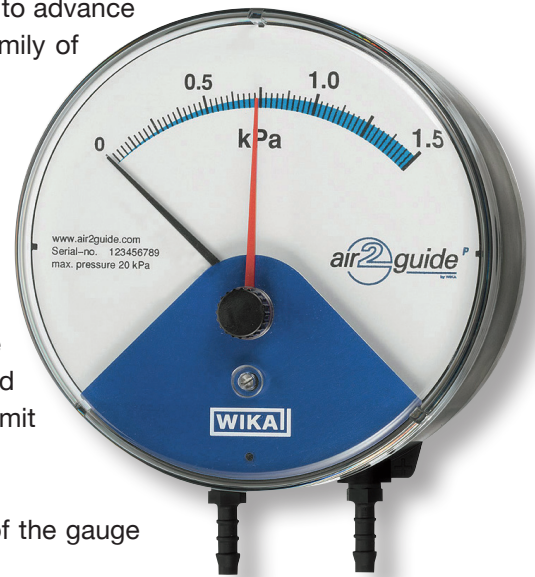

The air2guide features a two-part measuring system that separates the media from case components. Standardized case designs allow mechanical and electronic output configurations to utilize identical components and permit the replacement of only the measuring system.

Another WIKAI innovation is the ability to easily align the dial from the front of the gauge after the gauge has been installed.

It has also been retrofitted to existing hole-patterns, eliminating the need for tools. A complete line of accessories, mounting options, custom dials and configurations are also available.

The air2guide features an excellent price-performance ratio, numerous standard features, and a three-year extended warranty, all backed by WIKAI's worldwide service and technical knowhow.
