Snubber for pressure measuring instruments
Model 910.12, brass, steel or stainless steel

Applications

- Snubbers protect pressure measuring instruments from pressure surges and pulsations in the medium
- Stainless steel version for aggressive media, even in aggressive environments
- Process industry: Machine building, general plant construction, chemical industry, petrochemical industry, power plants, mining, on-/offshore and environmental technology

Special features

- Max. temperature 120 °C
- Nominal pressures to 400 bar

Description

Snubbers are adjustable (modification of the flow cross-section) and can thus be adapted individually to the respective operating conditions. A readjustment during operation, if required, is possible at any time. The pulsations and pressure surges in the medium, occurring e.g. in compressors, steam engines, hydraulic presses, tensile testing machines etc., are largely compensated by this device. Snubbers ensure a considerably prolonged service life of the pressure measuring instruments and improve the reading accuracy of pressure gauges.
Standard version

Connection to the pressure measuring instrument
G ½ female per EN 837-1/7.3

Process connection
G ½ B per EN 837-1/7.3

Options

- Material: Monel
- Other process connection: G ¼, G ⅜ per EN 837-1/7.3, M20 x 1.5, ¼ NPT, ½ NPT
- Oil and grease free for oxygen: max. 50 bar or +60 °C (for brass and 1.4571 materials only)
- Inspection certificate per DIN 50049 / EN 10204 3.1

Dimensions in mm
