Supplementary documentation

Information:
Supplementary documents appropriate to the ordered version come with the delivery. You can find them listed in chapter "Product description".

Instructions manuals for accessories and replacement parts

Tip:
To ensure reliable setup and operation of your IPT-1* Vers. 3.0, we offer accessories and replacement parts. The corresponding documentations are:

• Operating instructions manual "External display and adjustment unit"

Editing status: 2013-06-05
1 About this document

1.1 Function
This operating instructions manual provides all the information you need for mounting, connection and setup as well as important instructions for maintenance and fault rectification. Please read this information before putting the instrument into operation and keep this manual accessible in the immediate vicinity of the device.

1.2 Target group
This operating instructions manual is directed to trained specialist personnel. The contents of this manual should be made available to these personnel and put into practice by them.

1.3 Symbolism used

- **Information, tip, note**
  This symbol indicates helpful additional information.

- **Caution:** If this warning is ignored, faults or malfunctions can result.

- **Warning:** If this warning is ignored, injury to persons and/or serious damage to the instrument can result.

- **Danger:** If this warning is ignored, serious injury to persons and/or destruction of the instrument can result.

- **Ex applications**
  This symbol indicates special instructions for Ex applications.

- **List**
  The dot set in front indicates a list with no implied sequence.

- **Action**
  This arrow indicates a single action.

- **Sequence of actions**
  Numbers set in front indicate successive steps in a procedure.

- **Battery disposal**
  This symbol indicates special information about the disposal of batteries and accumulators.
2 For your safety

2.1 Authorised personnel
Mount and set up the pressure transmitter only if you know the applicable national regulations and have the appropriate qualification. You must be acquainted with the regulations and instructions for hazardous areas, measurement and control technology as well as electrical circuits because the pressure transmitter is "electrical equipment" according to EN 50178. Depending on the application conditions, it is necessary that you have appropriate knowledge, e.g. concerning corrosive products or high pressure.

2.2 Appropriate use
IPT-1* Vers. 3.0 is a pressure transmitter for measurement of gauge pressure, absolute pressure and vacuum.
You can find detailed information on the application range in chapter "Product description".
Operational reliability is ensured only if the instrument is properly used according to the specifications in the operating instructions manual as well as possible supplementary instructions.
For safety and warranty reasons, any invasive work on the device beyond that described in the operating instructions manual may be carried out only by personnel authorised by the manufacturer. Arbitrary conversions or modifications are explicitly forbidden.

2.3 Warning about incorrect use
Inappropriate or incorrect use of the instrument can give rise to application-specific hazards, e.g. vessel overfill or damage to system components through incorrect mounting or adjustment.

2.4 General safety instructions
This is a high-tech instrument requiring the strict observance of standard regulations and guidelines. The user must take note of the safety instructions in this operating instructions manual, the country-specific installation standards as well as all prevailing safety regulations and accident prevention rules.
The instrument must only be operated in a technically flawless and reliable condition. The operator is responsible for trouble-free operation of the instrument.
During the entire duration of use, the user is obliged to determine the compliance of the necessary occupational safety measures with the current valid rules and regulations and also take note of new regulations.

2.5 Safety label on the instrument
The safety approval markings and safety tips on the device must be observed.
2.6  CE conformity
This device fulfills the legal requirements of the applicable EC guidelines. By attaching the CE mark, we provide confirmation of successful testing.

2.7  Measuring range - permissible process pressure
Due to the application, a measuring cell with a measuring range higher than the permissible pressure range of the process fitting may have been integrated. The permissible process pressure is stated with "Process pressure" on the type label, see chapter 3.1 "Configuration". For safety reasons, this range must not be exceeded.

2.8  Fulfillment of NAMUR recommendations
The device fulfills the requirements of the applicable NAMUR recommendations.

2.9  Safety instructions for Ex areas
Please note the Ex-specific safety information for installation and operation in Ex areas. These safety instructions are part of the operating instructions manual and come with the Ex-approved instruments.

2.10  Safety instructions for oxygen applications
For instruments in oxygen applications the special instructions in chapters "Storage and transport", "Mounting" as well as "Technical data" under "Process conditions" must be noted. Furthermore the valid national regulations, implementation instructions and memorandums of the professional associations must be noted.
3 Product description

3.1 Configuration

The scope of delivery encompasses:

- IPT-1* Vers. 3.0 process pressure transmitter
- Documentation
  - this operating instructions manual
  - Operating instructions manual "Display and adjustment module" (optional)
  - Supplementary instructions manual "Plug connector for continuously measuring sensors" (optional)
  - Ex-specific "Safety instructions" (with Ex versions)
  - if necessary, further certificates

Instruments in the version "Oil and grease-free for oxygen applications" are equipped with a supplementary label. The supplementary label contains instructions on oil and grease-free parts of the instrument.

The IPT-1* Vers. 3.0 consists of the components:

- Process fitting with measuring cell
- Housing with electronics, optionally available with plug connector
- Housing cover, optionally available with display and adjustment module

The components are available in different versions.

![Diagram](image)

**Fig. 1: Example of a IPT-1* Vers. 3.0 with manometer connection G½ A according to EN 837 and Alu housing**

1. Housing cover with integrated display and adjustment module (optional)
2. Housing with electronics
3. Process fitting with measuring cell

The nameplate contains the most important data for identification and use of the instrument:

- Article number
- Serial number
- Technical data
### 3.2 Principle of operation

**Application area**

IPT-1* Vers. 3.0 is a pressure transmitter for measurement of overpressure, absolute pressure or vacuum. Measured products are gases, vapours and liquids in measuring ranges up to 4000 bar (400 MPa); with front-flush version also viscous liquids in measuring ranges up to 600 bar (60 MPa).

**Functional principle**

The process pressure acts on the sensor element via the stainless steel diaphragm and an internal transmission liquid. This causes a resistance change which is converted into a corresponding output signal and outputted as a measured value. With measuring ranges up to 16 bar a pieoresistive sensor element is used, with measuring ranges from 25 bar a strain gauge (DMS) sensor element.

**Power supply and bus communication**

Power supply via the Profibus DP/PA segment coupler. A two-wire cable according to Profibus specification serves as carrier of both power and digital data transmission for multiple sensors. The instrument profile of IPT-1* Vers. 3.0 corresponds to profile specification version 3.0.

**GSD/EDD**

The GSD (instrument master files) and bitmap files necessary for planning your Profibus DP (PA) communication network are available from the download section on the WIKA homepage www.wika.com under "Service". There you can also find the appropriate certificates. In a PDM environment, an EDD (Electronic Device Description) is also required to enable the full range of sensor functions (also available as a download). A CD with the appropriate files can be ordered via e-mail or by phone from one of the WIKA agencies.

The backlight of the display and adjustment module is powered by the sensor. Prerequisite is a certain level of operating voltage.

The data for power supply are specified in chapter "Technical data".

### 3.3 Adjustment

The instrument can be adjusted with the following adjustment media:

- With the display and adjustment module
- the Simatic adjustment program PDM

The entered parameters are generally saved in IPT-1* Vers. 3.0, optionally also in the indicating/adjustment module.

### 3.4 Packaging, transport and storage

**Packaging**

Your instrument was protected by packaging during transport. Its capacity to handle normal loads during transport is assured by a test based on ISO 4180.

The packaging of standard instruments consists of environment-friendly, recyclable cardboard. For special versions, PE foam or PE foil is also used. Dispose of the packaging material via specialised recycling companies.
Caution:
Instruments for oxygen applications are sealed in PE foil and provided with a label "Oxygen! Use no Oil". Remove this foil just before mounting the instrument! See instruction under "Mounting".

Transport
Transport must be carried out under consideration of the notes on the transport packaging. Nonobservance of these instructions can cause damage to the device.

Transport inspection
The delivery must be checked for completeness and possible transit damage immediately at receipt. Ascertained transit damage or concealed defects must be appropriately dealt with.

Storage
Up to the time of installation, the packages must be left closed and stored according to the orientation and storage markings on the outside.

Unless otherwise indicated, the packages must be stored only under the following conditions:
- Not in the open
- Dry and dust free
- Not exposed to corrosive media
- Protected against solar radiation
- Avoiding mechanical shock and vibration

Storage and transport temperature
- Storage and transport temperature see chapter "Supplement - Technical data - Ambient conditions"
- Relative humidity 20 ... 85 %
4 Mounting

4.1 General instructions

Suitability for the process conditions

Make sure that all parts of the instrument coming in direct contact with the process, especially the sensor element, process seal and process fitting, are suitable for the existing process conditions, such as process pressure, process temperature as well as the chemical properties of the medium.

You can find the specifications in chapter "Technical data" and on the nameplate.

Diaphragm protection

To protect the diaphragm, the process fitting is covered by a protective cap.

Remove the protective cap just before installation so that the diaphragm will not get damaged. It is recommended to keep the cap and use it again later for storage or transport.

Installation position

Select an installation position you can easily reach for mounting and connecting as well as later retrofitting of a display and adjustment module. The housing can be rotated by 330° without the use of any tools. You can also install the display and adjustment module in four different positions (each displaced by 90°).

Moisture

Use the recommended cables (see chapter “Connecting to power supply”) and tighten the cable gland.

You can give your instrument additional protection against moisture penetration by leading the connection cable downward in front of the cable entry. Rain and condensation water can thus drain off. This applies mainly to outdoor mounting as well as installation in areas where high humidity is expected (e.g. through cleaning processes) or on cooled or heated vessels.

Fig. 2: Measures against moisture penetration

Ventilation and pressure compensation

The ventilation of the electronics housing as well as the atmospheric pressure compensation for the measuring cell are realised via a filter element in the area of the cable gland.
Fig. 3: Position of the filter element
1 Filter element
2 Blind plug

Caution:
Due to the filter effect, the pressure compensation is time delayed. When opening/closing the housing cover quickly, the measured value can change for a period of approx. 5 s by up to 15 mbar.

Information:
Make sure that the filter element is always free of buildup during operation. A high-pressure cleaner may not be used for cleaning.

Temperature limits
Higher process temperatures mean often also higher ambient temperatures.

Fig. 4: Temperature ranges
1 Process temperature
2 Ambient temperature

Make sure that the upper temperature limits for the environment of electronics housing and connection cable specified in chapter "Technical data" are not exceeded.

Oxygen applications
Instruments in the version "Oil and grease free for oxygen" should be unpacked just before mounting. After the protective cover of the process fitting has been removed, the label "O₂" on the process fitting is visible.

Danger:
Avoid oil, grease or contamination. Explosion danger!
4.2 Mounting instructions

Installation position

IPT-1* Vers. 3.0 functions in any installation position. It is mounted according to the same directives as a manometer (DIN EN 839-2).\(^1\)

Information:

We recommend using lock fittings, measuring instrument holders and siphons from the line of WIKA accessories.

4.3 Mounting steps

Welding the socket

To mount IPT-1* Vers. 3.0, a welded socket is necessary. Use components from the line of WIKA mounting accessories.

→ Note the applicable welding standards (segment welding procedure) when welding the socket.

Sealing/Screwing in

Use the seal corresponding to the instrument:

- Process fitting GD: Tesnit seal in front of the thread
- or -

Seal the thread with resistant seal material:

- Process fitting GN

→ Screw IPT-1* Vers. 3.0 into the welded socket. Tighten the hexagon on the process fitting with a suitable wrench. Wrench size, see chapter "Dimensional drawings".

Warning:

The housing must not be used to screw the instrument in! Applying tightening force can damage internal parts of the housing.

\(^1\) Probable position correction see chapter "Setup steps".
5 Connecting to power supply

5.1 Preparing the connection

Always keep in mind the following safety instructions:

- Connect only in the complete absence of line voltage
- If voltage surges are expected, overvoltage arresters should be installed according to Profibus specifications

In hazardous areas you must take note of the respective regulations, conformity and type approval certificates of the sensors and power supply units.

Power is supplied via a Profibus DP/PA segment coupler. The power supply range can differ depending on the instrument version. The exact range is stated in the "Technical data".

IPT-1* Vers. 3.0 is connected with screened cable according to the Profibus specification. Power supply and digital bus signal are carried over the same two-wire connection cable.

Use cable with round cross-section. A cable outer diameter of 5 … 9 mm (0.2 … 0.35 in) ensures the seal effect of the cable gland. If you are using cable with a different diameter or cross-section, exchange the seal or use a suitable cable gland.

Please make sure that your installation is carried out according to the Profibus specification. In particular, make sure that the termination of the bus is done with appropriate terminating resistors.

With systems with potential equalisation, connect the cable screen directly to ground potential at the power supply unit, in the connection box and at the sensor. The screen in the sensor must be connected directly to the internal ground terminal. The ground terminal outside on the housing must be connected to the potential equalisation (low impedance).

In systems without potential equalisation, connect the cable screen directly to ground potential at the power supply unit and at the sensor. In the connection box or T-distributor, the screen of the short stub to the sensor must not be connected to ground potential or to another cable screen. The cable screens to the power supply unit and to the next distributor must be connected to each other and also connected to ground potential via a ceramic capacitor (e.g. 1 nF, 1500 V). The low frequency potential equalisation currents are thus suppressed, but the protective effect against high frequency interference signals remains.

The total capacitance of the cable and of all capacitors must not exceed 10 nF in Ex applications.

Take note of the corresponding installation regulations for Ex applications. In particular, make sure that no potential equalisation currents flow over the cable screen. In case of grounding on both sides this can be achieved by the use of a capacitor or a separate potential equalisation.
5 Connecting to power supply

5.2 Connection procedure
Proceed as follows:
1. Unscrew the housing cover
2. If a display and adjustment module is installed, remove it by turning it slightly to the left.
3. Loosen compression nut of the cable entry
4. Remove approx. 10 cm (4 in) of the cable mantle, strip approx. 1 cm (0.4 in) of insulation from the ends of the individual wires
5. Insert the cable into the sensor through the cable entry
6. Lift the opening levers of the terminals with a screwdriver (see following illustration)
7. Insert the wire ends into the open terminals according to the wiring plan

Fig. 5: Connection steps 6 and 7

8. Press down the opening levers of the terminals, you will hear the terminal spring closing
9. Check the hold of the wires in the terminals by lightly pulling on them
10. Connect the screen to the internal ground terminal, connect the outer ground terminal to potential equalisation
11. Tighten the compression nut of the cable entry. The seal ring must completely encircle the cable
12. Screw the housing cover back on
The electrical connection is hence finished.
5.3  Wiring plan, single chamber housing

The following illustrations apply to the non-Ex as well as to the Ex-ia version.

**Electronics and connection compartment**

![Fig. 6: Electronics and connection compartment, single chamber housing](image)

Wiring plan external electronics

Fig. 19: Wiring plan external electronics
1 Voltage supply

Switch-on phase

5.7 Switch-on phase

After IPT-1* Vers. 3.0 is connected to voltage supply or after voltage recurrence, the instrument carries out a self-check for approx. 30 seconds. The following steps are carried out:

- Internal check of the electronics
- Indication of the instrument type, the firmware as well as the sensor TAGs (sensor designation)
- Status byte goes briefly to fault value
Then the current measured value will be displayed and the corresponding digital output signal will be outputted to the cable.\(^2\)

\(^2\) The values correspond to the actual measured level as well as to the settings already carried out, e.g. default setting.
6 Set up with the display and adjustment module

6.1 Short description
The display and adjustment module is used for measured value display, adjustment and diagnosis. It can be mounted in the following housing versions and instruments:

- All sensors DPT-10 and IPT-1*, in the single as well as double chamber housing (optionally in the electronics or connection compartment)
- External display and adjustment unit

Note:
You can find detailed information on the adjustment in the operating instructions manual "Display and adjustment module".

6.2 Insert display and adjustment module
The display and adjustment module can be inserted and removed at any time. It is not necessary to interrupt the voltage supply.

For installation proceed as follows:
1. Unscrew the housing cover
2. Place the display and adjustment module in the desired position on the electronics (you can choose any one of four different positions - each displaced by 90°)
3. Press the display and adjustment module onto the electronics and turn it to the right until it snaps in.
4. Screw housing cover with inspection window tightly back on

Removal is carried out in reverse order.

The display and adjustment module is powered by the sensor, an additional connection is not necessary.
6 Set up with the display and adjustment module

Fig. 20: Insert display and adjustment module

Note:
If you intend to retrofit the instrument with a display and adjustment module for continuous measured value indication, a higher cover with an inspection glass is required.

6.3 Adjustment system

Fig. 21: Display and adjustment elements

1. LC display
2. Indication of the menu item number
3. Adjustment keys
6 Set up with the display and adjustment module

Key functions

- **[OK] key:**
  - Move to the menu overview
  - Confirm selected menu
  - Edit parameter
  - Save value

- **[->] key to select:**
  - Menu change
  - Select list entry
  - Select editing position

- **[+] key:**
  - Change value of the parameter

- **[ESC] key:**
  - Interrupt input
  - Jump to the next higher menu

Adjustment system

The sensor is adjusted via the four keys of the display and adjustment module. The LC display indicates the individual menu items. The functions of the individual keys are shown in the above illustration. Approx. 10 minutes after the last pressing of a key, an automatic reset to measured value indication is triggered. Any values not confirmed with **[OK]** will not be saved.

6.4 Setup steps

Address setting

Before starting the actual parameter adjustment of a Profibus PA sensor, the address setting must first be carried out. You will find a detailed description in the operating instructions manual of the display and adjustment module or in the online help of PACTware or DTM.

Level or process pressure measurement

IPT-1* Vers. 3.0 can be used for level as well as for process pressure measurement. Default setting is level measurement. The mode can be changed in the adjustment menu.

Depending on the application only the respective subchapter "Level or process pressure measurement" is of importance. There, you find the individual adjustment steps.

Level measurement

Parameter adjustment

"Level measurement"

Set up IPT-1* Vers. 3.0 in the following sequence:

1. Selecting adjustment unit/density unit
2. Carry out a position correction
3. Carry out min. adjustment
4. Carry out max. adjustment

In the menu item "Adjustment unit" you select the physical unit in which the adjustment should be carried out, e.g. mbar, bar, psi...

The position correction compensates the influence of the mounting position or static pressure on the measurement. It does not influence the adjustment values.
6 Set up with the display and adjustment module

Information:
The steps 1, 3 and 4 are not necessary for instruments which are already preset according to customer specifications!
You can find the data on the type label on the instrument or in the menu items of the min./max. adjustment.
The display and adjustment module enables the adjustment without filling or pressure. Thanks to this, you can carry out your settings already in the workshop without the instrument having to be installed.
The actual measured value is also displayed in the menu items for min./max. adjustment.

Select unit

In this menu item you select the adjustment unit as well as the unit for the temperature indication in the display.
To select the adjustment unit (in the example switching over from bar to mbar), proceed as follows:  
1. Push the [OK] button in the measured value display, the menu overview is displayed.

2. Confirm the menu "Basic adjustment" with [OK], the menu item "Unit" will be displayed.

3. Activate the selection with [OK] and select "Units of measurement" with [->].

4. Activate the selection with [OK] and select the requested unit with [->] (in the example mbar).

5. Confirm with [OK] and move to position correction with [->].
The adjustment unit is thus switched over from bar to mbar.

Information:
When switching over to adjustment in a height unit (in the example from bar to m), the density also has to be entered.
Proceed as follows:
1. Push the [OK] button in the measured value display, the menu overview is displayed.

2. Confirm the menu "Basic adjustment" with [OK], the menu item "Units of measurement" will be displayed.

3. Activate the selection with [OK] and select the requested unit with [->] (in the example m).

-selection options: mbar, bar, psi, kPa, MPa, inHg, mmHg, inH₂O, mmH₂O.
6 Set up with the display and adjustment module

4. Confirm with [OK], the submenu "Density unit" appears.

5. Select the requested unit, e.g. kg/dm³ with [->] and confirm with [OK], the submenu "Density" appears.

6. Enter the requested density value with [->] and [+], confirm with [OK] and move to position correction with [->].

The adjustment unit is thus switched over from bar to m.

Proceed as follows to select the temperature unit:

1. Activate the selection with [OK] and select "Temperature unit" with [->].
2. Activate the selection with [OK] and select the requested unit with [->] (e.g. °F).
3. Confirm with [OK].

The temperature unit is hence switched over from °C to °F.

---

**Carry out a position correction**

Proceed as follows:

1. Activate in the menu item "Position correction" the selection with [OK].

2. Select with [->], e.g. to accept actual measured value.

3. Confirm with [OK] and move to min.(zero) adjustment with [->].

**Carry out min. adjustment**

Proceed as follows:

1. Edit the % value in the menu item "Min. adjustment" with [OK].

2. Set the requested percentage value with [+] and [->].

---

4) Selection options: °C, °F.
6. Set up with the display and adjustment module

3. Confirm with [OK] and edit the requested mbar value.
4. Set the requested mbar value with [+] and [->].
5. Confirm with [+] and move to max. adjustment with [->].
The min. adjustment is finished.

Information:
For an adjustment with filling, simply enter the actual measured value indicated at the bottom of the display.

If the adjustment ranges are exceeded, the message "Outside parameter limits" appears. The editing procedure can be aborted with [ESC] or the displayed limit value can be accepted with [OK].

Carry out max. adjustment

Proceed as follows:
1. Edit the % value in the menu item "Max. adjustment" with [OK].

<table>
<thead>
<tr>
<th>Max. adjustment</th>
</tr>
</thead>
<tbody>
<tr>
<td>+100.0 %</td>
</tr>
<tr>
<td>=</td>
</tr>
<tr>
<td>+1000.0 mbar</td>
</tr>
<tr>
<td>0000.0 mbar</td>
</tr>
</tbody>
</table>

Information:
The displayed pressure for 100 % corresponds to the nominal measuring range of the sensor (in the above example 1 bar = 1000 mbar).

2. Set the requested percentage value with [->] and [OK].
3. Confirm with [OK] and edit the requested mbar value.
4. Set the requested mbar value with [+] and [->].
5. Confirm with [OK] and move to the menu overview with [ESC].
The max. adjustment is finished.

Information:
For an adjustment with filling, simply enter the actual measured value indicated at the bottom of the display.

If the adjustment ranges are exceeded, the message "Outside parameter limits" appears. The editing procedure can be aborted with [ESC] or the displayed limit value can be accepted with [OK].

Process pressure measurement

Set up IPT-1* Vers. 3.0 in the following sequence:
1. Select application "Process pressure measurement"
2. Select the unit of measurement
3. Carry out a position correction
4. Carrying out zero adjustment
5. Carry out span adjustment

In the menu item "Adjustment unit" you select the physical unit in which the adjustment should be carried out, e.g. mbar, bar, psi...
The position correction compensates the influence of the mounting position or static pressure on the measurement. It does not influence the adjustment values.
In the menu items "zero" and "span" you determine the span of the sensor, the span corresponds to the end value.

**Information:**
The steps 1, 3 and 4 are not necessary for instruments which are already preset according to customer specifications!

You can find the data on the type label on the instrument or in the menu items of the zero/span adjustment.

The display and adjustment module enables the adjustment without filling or pressure. Thanks to this, you can carry out your settings already in the workshop without the instrument having to be installed.

The actual measured value is displayed in addition to the menu items for zero/span adjustment.

---

**Select application "Process pressure measurement"**

IPT-1* Vers. 3.0 is preset to application "Level measurement". Proceed as follows when switching over to application "Process pressure measurement":

1. Push the `[OK]` button in the measured value display, the menu overview is displayed.

2. Select the menu "Service" with `[->]` and confirm with `[OK]`.

3. Select the menu item "Application" with `[->]` and edit with `[OK]`.

**Warning:**
Note the warning: "Output can change".

4. Select with `[->]"OK"` and confirm with `[OK]`.

5. Select "Process pressure" from the list and confirm with `[OK]`.

**Select unit**

In this menu item you select the adjustment unit as well as the unit for the temperature indication in the display.

To select the adjustment unit (in the example switching over from bar to mbar), proceed as follows:

1. Push the `[OK]` button in the measured value display, the menu overview is displayed.

2. Confirm the menu "**Basic adjustment**" with `[OK]`, the menu item "Unit" will be displayed.

---

5) Selection options: mbar, bar, psi, Pa, kPa, MPa, inHg, mmHg, inH₂O, mmH₂O.
3. Activate the selection with [OK] and select "Units of measurement with [->].

4. Activate the selection with [OK] and select the requested unit with [->] (in the example mbar).

5. Confirm with [OK] and move to position correction with [->].

The adjustment unit is thus switched over from bar to mbar.

Proceed as follows to select the temperature unit:

1. Activate the selection with [OK] and select "Temperature unit with [->].

2. Activate the selection with [OK] and select the requested unit with [->] (e.g. °F).

3. Confirm with [OK].

The temperature unit is hence switched over from °C to °F.

---

**Carry out a position correction**

Proceed as follows:

1. Activate in the menu item "Position correction" the selection with [OK].

2. Select with [->], e.g. to accept actual measured value.

3. Confirm with [OK] and move to min.(zero) adjustment with [->].

---

**Carrying out zero adjustment**

Proceed as follows:

1. Edit the mbar value in the menu item "zero" with [OK].

2. Set the requested mbar value with [+] and [->].

3. Confirm with [+] and move to span adjustment with [->].

The zero adjustment is finished.

---

6) Selection options: °C, °F.
Information:
The zero adjustment shifts the value of the span adjustment. The span, i.e. the difference between these values, however, remains unchanged.

Information:
For an adjustment with pressure, simply enter the actual measured value indicated at the bottom of the display.

If the adjustment ranges are exceeded, the message "Outside parameter limits" appears. The editing procedure can be aborted with [ESC] or the displayed limit value can be accepted with [OK].

Proceed as follows:
1. Edit the mbar value in the menu item "span" with [OK].

Information:
The displayed pressure for 100 % corresponds to the nominal measuring range of the sensor (in the above example 1 bar = 1000 mbar).

2. Set the requested mbar value with [->] and [OK].
3. Confirm with [OK] and move to the menu overview with [ESC].

The span adjustment is finished.

Information:
For an adjustment with pressure, simply enter the actual measured value indicated at the bottom of the display.

If the adjustment ranges are exceeded, the message "Outside parameter limits" appears. The editing procedure can be aborted with [ESC] or the displayed limit value can be accepted with [OK].

Copy sensor data
This function enables reading out parameter adjustment data as well as writing parameter adjustment data into the sensor via the display and adjustment module. A description of the function is available in the operating instructions manual "Display and adjustment module".

The following data are read out or written with this function:
- Measured value presentation
- Adjustment
- Damping
- Linearization curve
- Sensor-TAG
- Displayed value
- Scaling unit (Out-Scale unit)
- Positions after the decimal point (scaled)
- Scaling PA/Out-Scale 4 values
- Unit of measurement
- Language

The following safety-relevant data are not read out or written:
6 Set up with the display and adjustment module

- Sensor address
- PIN
- Application

Copy sensor data
Copy sensor data?

Reset

The reset function resets all parameters adjusted by the user to the delivery status and the peak values to the actual values.

Select reset?▼

6.10 Saving the parameter adjustment data

We recommended noting the adjusted data, e.g. in this operating instructions manual, and archiving them afterwards. They are thus available for multiple use or service purposes.

If IPT-1* Vers. 3.0 is equipped with a display and adjustment module, the most important data can be read out of the sensor into the display and adjustment module. The procedure is described in the operating instructions manual "Display and adjustment module" in the menu item "Copy sensor data". The data remain there permanently even if the sensor power supply fails.

If it is necessary to exchange the sensor, the display and adjustment module is inserted into the replacement instrument and the data are written into the sensor under the menu item "Copy sensor data".
7 Setup with PDM

7.1 Parameter adjustment with PDM

For WIKA sensors, instrument descriptions are also available as EDDs for the adjustment program PDM. The instrument descriptions are already implemented in the current version of PDM. For older versions of PDM, a free-of-charge download is available via Internet. Go via www.wika.com to the item "Service".
8 Maintenance and fault rectification

8.1 Maintenance
If the instrument is used properly, no special maintenance is required in normal operation.

In some applications, product buildup on the diaphragm can influence the measuring result. Depending on the sensor and application, take precautions to ensure that heavy buildup, and especially a hardening thereof, is avoided.

Cleaning
The diaphragm should be cleaned if necessary. For this reason, the resistance of the materials to cleaning processes must be ensured. The large variety of chemical seal applications makes special cleaning instructions for each application necessary. Please contact the agency serving you.

Caution:
On instruments with a chemical seal, never clean the separating diaphragm mechanically with hard objects, such as tools! This can damage the diaphragm and lead to filling oil leaks.

8.2 Rectify faults
The operator of the system is responsible for taking suitable measures to rectify faults.

Failure reasons
IPT-1* Vers. 3.0 offers maximum reliability. Nevertheless, faults can occur during operation. These may be caused by the following, e.g.:

- Sensor
- Process
- Voltage supply
- Signal processing

Fault rectification
The first measures to be taken are to check the output signals as well as to evaluate the error messages via the display and adjustment module. The procedure is described below. Further comprehensive diagnostics can be carried out on a PC with the software PACTware and the suitable DTM. In many cases, the causes can be determined and the faults rectified this way.

Checking Profibus PA
The following table describes possible errors and helps to remove them:

<table>
<thead>
<tr>
<th>Error</th>
<th>Cause</th>
<th>Rectification</th>
</tr>
</thead>
<tbody>
<tr>
<td>When an additional instrument is connected, the segment fails.</td>
<td>Max. supply current of the segment coupler exceeded</td>
<td>Measure the current consumption, reduce size of segment</td>
</tr>
</tbody>
</table>
### Error and Fault Rectification

<table>
<thead>
<tr>
<th>Error</th>
<th>Cause</th>
<th>Rectification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wrong presentation of the measured value in Simatic S5</td>
<td>Simatic S5 cannot interpret the number format IEEE of the measured value</td>
<td>Insert converting component from Siemens</td>
</tr>
<tr>
<td>In Simatic S7 the measured value is always presented as 0</td>
<td>Only four bytes are consistently loaded in the PLC</td>
<td>Use function component SFC 14 to load 5 bytes consistently</td>
</tr>
<tr>
<td>Measured value on the display and adjustment module does not correspond to the value in the PLC</td>
<td>The menu item &quot;Display - Display value&quot; is not set to &quot;PA-Out&quot;</td>
<td>Check values and correct, if necessary</td>
</tr>
<tr>
<td>No connection between PLC and PA network</td>
<td>Incorrect adjustment of the bus parameter and the segment coupler-dependent baud rate</td>
<td>Check data and correct, if necessary</td>
</tr>
<tr>
<td>Instrument does not appear during connection setup</td>
<td>Profibus DP cable pole-reversed</td>
<td>Check cable and correct, if necessary</td>
</tr>
<tr>
<td>Instrument not connected to the segment, double assignment of an address</td>
<td>Incorrect termination</td>
<td>Check termination at the beginning and end points of the bus and terminate, if necessary, according to the specification</td>
</tr>
</tbody>
</table>

### Error messages via the display and adjustment module

<table>
<thead>
<tr>
<th>Error code</th>
<th>Cause</th>
<th>Rectification</th>
</tr>
</thead>
<tbody>
<tr>
<td>E013</td>
<td>no measured value available</td>
<td>Exchange the instrument or send it in for repair</td>
</tr>
<tr>
<td>E017</td>
<td>Adjustment span too small</td>
<td>Repeat with modified values</td>
</tr>
<tr>
<td>E036</td>
<td>no operable sensor software</td>
<td>Carry out a software update or send instrument for repair</td>
</tr>
<tr>
<td>E041</td>
<td>Hardware error, electronics defective</td>
<td>Exchange the instrument or send it in for repair</td>
</tr>
<tr>
<td>E113</td>
<td>Communication conflict</td>
<td>Exchange the instrument or send it in for repair</td>
</tr>
</tbody>
</table>

In Ex applications, the regulations for the wiring of intrinsically safe circuits must be observed.

### Reaction after fault rectification

Depending on the reason for the fault and the measures taken, the steps described in chapter "Set up" may have to be carried out again.
8.3 Instrument repair

You can find information for a return shipment under "Service" on our local website.

If a repair is necessary, please proceed as follows:

- Complete one form for each instrument
- If necessary, state a contamination
- Clean the instrument and pack it damage-proof
- Attach the completed form and possibly also a safety data sheet to the instrument
9 Dismounting

9.1 Dismounting steps

**Warning:**
Before dismounting, be aware of dangerous process conditions such as e.g. pressure in the vessel, high temperatures, corrosive or toxic products etc.

Take note of chapters "Mounting" and "Connecting to power supply" and carry out the listed steps in reverse order.

9.2 Disposal

The instrument consists of materials which can be recycled by specialised recycling companies. We use recyclable materials and have designed the parts to be easily separable.

Materials: see chapter "Technical data"

If you have no way to dispose of the old instrument properly, please contact us concerning return and disposal.
## 10 Supplement

### 10.1 Technical data

#### General data

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pressure type</td>
<td>Gauge pressure or gauge pressure</td>
</tr>
<tr>
<td>Measuring principle</td>
<td></td>
</tr>
<tr>

<td>Piezoresistive with internal transmission liquid</td>
</tr>
<tr>
<td>- Measuring ranges &gt; 16 bar</td>
<td>Strain gauge (DMS) dry</td>
</tr>
<tr>
<td>Service interface</td>
<td>I²C-Bus</td>
</tr>
</tbody>
</table>

#### Materials and weights

316L corresponds to 1.4404 or 1.4435, 316Ti corresponds to 1.4571

Materials, wetted parts

- Process fitting: 316Ti, Hastelloy C4, Hastelloy C276
- Diaphragm: 316Ti, Hastelloy C4, Hastelloy C276, Elgiloy
- Diaphragm from measuring range 25 bar, with not flush version: Elgiloy 2.4711
- Seal ring, O-ring: FKM (VP2/A), EPDM (A+P 75.5/KW75F), NBR (COG)

Properties of metallic hygienic fittings

- Surface quality, typ.: R_a < 0.8 µm

Materials, non-wetted parts

- Internal transmission liquid: Synthetic oil, Halocarbon oil\(^1\)\(^2\)
- Housing: Plastic PBT, Alu die-casting powder-coated, 316L
- Seal between housing and housing cover: NBR (stainless steel housing), silicone (Aluminium housing)
- Inspection window in housing cover for display and adjustment module: Polycarbonate (UL-746-C listed)
- Ground terminal: 316Ti/316L
- Ohmic contact: Between ground terminal and process fitting
- Weight approx.: 1.2 kg (2.646 lbs)

#### Output variable

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output signal</td>
<td>Digital output signal, format according to IEEE-754</td>
</tr>
<tr>
<td>Sensor address</td>

</tr>
<tr>
<td>Current value</td>
<td>10 mA, ±0.5 mA</td>
</tr>
</tbody>
</table>

#### Dynamic behaviour output

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Run-up time approx.</td>
<td>10 s</td>
</tr>
</tbody>
</table>
Fig. 22: Sudden change of the process variable. $t_T$: dead time; $t_A$: rise time; $t_S$: jump response time

1. Process variable
2. Output signal

Dead time $\leq 150$ ms
Rise time $\leq 100$ ms (10 ... 90 %)
Step response time $\leq 250$ ms (ti: 0 s, 10 ... 90 %)
Damping (63 % of the input variable) 0 ... 999 s, adjustable

### Input variable

#### Adjustment

Adjustment range of the min./max. adjustment relating to the nominal measuring range:
- Min. $-5$ ... $+95$ %
- Max. $-5$ ... $+105$ %

Adjustment range of the zero/span adjustment relating to the nominal measuring range:
- zero $-5$ ... $+95$ %
- Span $-5$ ... $+105$ %

Recommended max. turn down 10 : 1 (no limitation)

#### Nominal measuring ranges and overload capability in bar/kPa

The specifications are only an overview and refer to the measuring cell. Limitations due to the material and version of the process fitting are possible. The specifications on the nameplate apply.

<table>
<thead>
<tr>
<th>Nominal range</th>

</tr>
</tbody>
</table>

### Reference conditions and actuating variables (according to DIN EN 60770-1)

- **Temperature**: +18 ... +30 °C (+64 ... +86 °F)
- **Relative humidity**: 45 ... 75 %
- **Air pressure**: 860 ... 1060 mbar/86 ... 106 kPa (12.5 ... 15.4 psi)

### Determination of characteristics

- **Limit point adjustment according to IEC 61298-2**
- **Characteristic curve**: Linear
- **Reference installation position**: upright, diaphragm points downward
- **Influence of the installation position**: depending on the chemical seal version

### Deviation determined according to the limit point method according to IEC 60770³)

Applies to **digital** interfaces (HART, Profibus PA, Foundation Fieldbus) as well as to **analogue** current output 4 ... 20 mA. Specifications refer to the set span. Turn down (TD) is the ratio nominal measuring range/set span.

#### Deviation for measuring ranges 0.4 ... 1000 bar

- **Turn down 1 : 1 up to 5 : 1**: < 0.1 %
- **Turn down > 5 : 1**: < 0.02 % x TD

#### Deviation for measuring ranges > 1000 bar

- **Turn down 1 : 1 up to 2 : 1**: < 0.6 %

#### Deviation with absolute pressure measuring range 0.1 bar

- **Turn down 1 : 1 up to 5 : 1**: < 0.25 %
- **Turn down > 5 : 1**: < 0.05 % x TD

### Influence of the product or ambient temperature

#### Thermal change zero signal and output span

Applies to the **digital** signal output (HART, Profibus PA, Foundation Fieldbus) as well as to **analogue** current output 4 ... 20 mA and refers to the set span. Turn down (TD) is the ratio nominal measuring range/set span.

Thermal change zero signal and output span, reference temperature 20 °C (68 °F):

- **In the compensated temperature range 0 ... +100 °C (+32 ... +212 °F)**: < 0.05 %/10 K x TD
- **Outside the compensated temperature range**: typ. < 0.05 %/10 K x TD

#### Thermal change, current output

Applies also to the **analogue** 4 ... 20 mA current output and refers to the set span.

Thermal change, current output: < 0.05 %/10 K, max. < 0.15 %, each with -40 ... +80 °C (-40 ... +176 °F)
Long-term stability (according to DIN 16086 and IEC 60770-1)

Applies to digital interfaces (HART, Profinbus PA, Foundation Fieldbus) as well as to analogue current output 4 … 20 mA. Specifications refer to the set span. Turn down (TD) = nominal measuring range/set span.

Long-term drift of the zero signal < (0.1 % x TD)/year

Ambient conditions

Ambient, storage and transport temperature
- Standard version -40 ... +80 °C (-40 ... +176 °F)
- Connection G1 A front-flush according to EHEDG -10 ... +80 °C (+14 ... +176 °F)
- Version for oxygen applications4) -40 ... +60 °C (-40 ... +140 °F)
- Versions IP 66/IP 68 (1 bar) and IP 68 (25 bar), connection cable PUR -20 ... +80 °C (-4 ... +176 °F)
- Version IP 66/IP 68 (1 bar), connection cable PE -20 ... +60 °C (-4 ... +140 °F)

Process conditions

The specifications are used as an overview. For pressure stage and product temperature the specifications on the type plate are applicable.

Product temperature standard, depending on the seal5)
- FKM (VP2/A) -20 ... +105 °C (-4 ... +221 °F)
- EPDM (A+P 75.5/KW75F) -40 ... +105 °C (-40 ... +221 °F)
- NBR (COG) -20 ... +105 °C (-4 ... +221 °F)

Product temperature front-flush threaded fitting G1 A according to EHEDG, threaded fitting M44 x 1.25 as well as hygienic fittings, depending on seal6)7)
- FKM (VP2/A) -20 ... +150 °C (-4 ... +302 °F)
- EPDM (A+P 75.5/KW75F) -30 ... +150 °C (-22 ... +302 °F)
- NBR (COG) -20 ... +150 °C (-4 ... +302 °F)

Vibration resistance mechanical vibrations with 4 g and 5 ... 100 Hz8)
Shock resistance Acceleration 100 g/6 ms9)
Electromechanical data - version IP 66/IP 67

Cable entry/plug\(^{(10)}\)
- Single chamber housing
  - 1 x cable gland M20 x 1.5 (cable: ø 5 ... 9 mm), 1 x blind plug M20 x 1.5
  - 1 x closing cap ½ NPT, 1 x blind plug ½ NPT
  - 1 x plug (depending on the version), 1 x blind stopper M20 x 1.5
- Double chamber housing
  - 1 x cable entry M20 x 1.5 (cable: ø 5 ... 9 mm), 1 x blind plug M20 x 1.5; plug M12 x 1 for the external display and adjustment unit (optional)
  - 1 x closing cap ½ NPT, 1 x blind plug ½ NPT, plug M12 x 1 for the external display and adjustment unit (optional)
  - 1 x plug (depending on the version), 1 x blind plug M20 x 1.5; plug M12 x 1 for the external display and adjustment unit (optional)

Spring-loaded terminals for wire cross-section up to 2.5 mm\(^2\) (AWG 14)

Display and adjustment module

| Voltage supply and data transmission | through the sensor |
| Indication                          | LC display in dot matrix |
| Adjustment elements                 | 4 keys |
| Protection rating                   | |
| - unassembled                       | IP 20 |
| - mounted into the sensor without cover | IP 40 |

Material
- Housing ABS
- Inspection window Polyester foil

Voltage supply

| Operating voltage                   | |
| Non-Ex instrument                   | 9 ... 32 V DC |
| Ex-ia instrument                    | 9 ... 24 V DC |
| Ex-d instrument                     | 14 ... 32 V DC |

| Operating voltage with illuminated display and adjustment module | |
| Non-Ex instrument                   | 18 ... 32 V DC |
| Ex-ia instrument                    | 18 ... 24 V DC |
| Ex-d instrument                     | 18 ... 32 V DC |

Max. number of sensors on the DP/PA segment coupler non-Ex/Ex 32/10
Electrical protective measures

Protection rating
- Housing, standard IP 66/IP 67
- Process component in IP 68 version IP 68 (25 bar)
- External housing IP 65

Overvoltage category III
Protection class II

Approvals
Depending on the version, instruments with approvals can have different technical data. For these instruments, please note the corresponding approval documents. They are included in the scope of delivery.

10.2 Information on Profibus PA

Instrument master file
The instrument master file (GSD) contains the characteristic data of the Profibus PA instrument. These data are, e.g. the permissible transmission rates as well as information on diagnostics values and the format of the measured value outputted by the PA instrument.

A bitmap file is also provided for the Profibus network planning tool. This file is installed automatically when the GSD file is integrated. The bitmap file is used for symbolic indication of the PA instrument in the configuration tool.

Ident number
Each Profibus instrument gets an unambiguous ident number (ID number) from the Profibus user organisation (PNO). This ID number is also included in the name of the GSD file. For IPT-1* Vers. 3.0 the ID number is 0x076F(hex) and the GSD file BR__076F.GSD. As an option to this manufacturer-specific GSD file, PNO provides also a general so-called profile-specific GSD file. For IPT-1* Vers. 3.0 you have to use the general GSD file PA139701.GSD. If the general GSD file is used, the sensor must be set to the profile-specific ident number via the DTM software. By default, the sensor operates with the manufacturer-specific ID number.

Note:
When using the profile-specific GSD file, the PA-OUT value as well as the temperature value are transmitted to the PLC (see block diagram "Cyclical data traffic").

Cyclical data traffic
The master class 1 (e.g. PLC) cyclically reads out measured values from the sensor during operation. The below block diagram below shows which data can be accessed by the PLC.
Module of the PA sensors

For the cyclic data traffic, IPT-1* Vers. 3.0 provides the following modules:

- **AI (PA-OUT)**
  - PA-OUT value of the FB1 after scaling
- **Temperature**
  - PA-OUT value of the FB2 after scaling
- **Additional Cyclic Value**
  - Additional cyclical value (depending on the source)
- **Free Place**
  - This module must be used if a value should not be used in the data telegram of the cyclical data traffic (e.g. replacement of the temperature and Additional Cyclic Value)

A maximum of three modules can be active. By means of the configuration software of the Profibus master you can determine the configuration of the cyclical data telegram with these modules. The procedure depends on the respective configuration software.

**Tip:**

The modules are available in two versions:

- Short for Profibus master supporting only one "Identifier Format" byte, e.g. Allen Bradley
Examples of telegram configuration

In the following you will see how the modules can be combined and how the appendant data telegram is structured.

Example 1 (standard setting) with pressure value, temperature value and additional cyclical value:
- AI (PA-OUT)
- Temperature
- Additional Cyclic Value

Data format of the output signal

<table>
<thead>
<tr>
<th>Byte4</th>
<th>Byte3</th>
<th>Byte2</th>
<th>Byte1</th>
<th>Byte0</th>
<th>Status</th>
<th>Value (IEEE-754)</th>
</tr>
</thead>
</table>

Fig. 29: Data format of the output signal

The status byte corresponds to profile 3.0 "Proﬁbus PA Proﬁle for Process Control Devices" coded. The status "Measured value OK" is coded as 80 (hex) (Bit7 = 1, Bit6 … 0 = 0).
The measured value is transferred as a 32 bit floating point number in the IEEE-754 format.
Byte n | Byte n+1 | Byte n+2 | Byte n+3
---|---|---|---
VZ | | | |
Sign | Exponent | Significant | Significant | Significant

Value = \((-1)^{VZ} \times 2^{(Exponent - 127)} \times (1 + Significant)\)
